

Atlas — Outcome-Based Roadmap

Last updated: August 2026 | Owner: Product Management

Product Vision Statement

Atlas transforms the mainframe from a system that demands deep tribal knowledge into one that any skilled practitioner can understand, safely change, and confidently operate — bringing the full power of z/OS infrastructure within reach of every person on the team, not just the few who have spent years mastering it.

North Star Metric (NSM)

Phase 1 (GA → H1 2027): Weekly active artifacts generated per connected environment — measures whether Atlas is actively being used to drive real decisions, not just installed.

Phase 2 (H1 2027 → H2 2027): % of environment change events that begin in Atlas — measures whether Atlas has become the default entry point for change work.

Phase 3 (2028+): % of z/OS change lifecycle managed end-to-end in Atlas (plan → assess → provision → test → deploy → monitor) — the ultimate proxy for the 80% shift described in the long-term vision.

Rationale: Artifact generation is the leading indicator in Phase 1

because it is immediately measurable from day one, directly reflects value delivery to individual users, and naturally ladders into the behavior change metric as provisioning and testing capabilities mature. We will instrument artifact creation events at launch.

IBM Business Objectives

#	Objective	Target	Time Horizon
1	Capture net new z software revenue through Atlas as a standalone product	First paid logos at GA	Dec 2026
2	Increase IBM zSW portfolio attach rate through Atlas integrations and upsell SKUs	Measurable attach lift	2027
3	Grow customer retention by reducing expert dependency and expanding the addressable user base on Z	Reduction in churn risk tied to skills gap	2027–2028
4	Establish Atlas as the front door to the IBM Z software portfolio	Platform transaction revenue contribution	2028+

The Pillars

Atlas is organized around three intelligence pillars that grow in capability and interdependency over time.

Pillar	What It Delivers	When It Matures
System Intelligence	Know your environment — topology, inventory, relationships, health	GA (Dec 2026)
Change Intelligence	Change safely — impact analysis, test orchestration, provisioning	H1 2027 → H2 2027
Predictive Intelligence	Stay ahead — drift detection, DR validation, anomaly prediction	H2 2027 → 2028+

Roadmap Timeline

Phase 0 — Private Preview at IBM TechXchange

Target: Oct 26, 2026

Theme: Prove the platform. Show that Atlas can understand a real enterprise Z environment through natural conversation.

Format: Curated demo experience on IBM-hosted infrastructure. Customers interact with Atlas against a real discovered environment (Bank of Z topology). Private, invitation-only. No customer data required.

Pillar: System Intelligence (MVP)

Product Outcomes:

- ≥5 named enterprise accounts engaged and providing feedback
- Executive sponsors in target accounts briefed and aligned
- Pipeline generation signal for Q4/Q1 close motions

Customer / Buyer Outcomes:

Outcome	Target Persona	Problem Solved
"I can see exactly how Atlas answers questions about a real Z environment — and immediately see how it would work for mine"	Systems Programmer	Hours of manual lookups replaced by one conversation
"I can generate a health check artifact without writing a single query"	Systems Programmer / Ops Lead	Preparing for a system change or audit previously took days
"I can understand the blast radius of a change before I make it"	Systems Programmer / CISO	Risk of unexpected outages from uninformed changes
"I can onboard a new team member to this environment in minutes, not weeks"	Team Lead / Manager	Tribal knowledge is a flight risk

Capabilities Delivered:

Capability	Description	Pillar
UI-driven z/OS discovery agent deployment	Install from Atlas Server UI; Kubernetes operator drives parallel deployment to z/OS systems	System Intelligence
Config-as-Code topology	OS, middleware, software, application discovery; attributes surfaced in topology graph DB	System Intelligence
PTF & software inventory	Z Software Discovery integration; installed PTF inventory + current availability from ibm.com; software compatibility reports	System Intelligence

Dynamic blueprint/topology UI	Pan, zoom, filter, highlight based on chat intent; intent-driven visualization	System Intelligence
Agentic chat (WXA4Z v2 in-cluster)	Multi-source querying via Topology Integration Broker (TIB); natural language answers across config, PTFs, inventory, transaction flows	System Intelligence
TIB integrations	Concert for Z, ZoC, Intellimagic, OMEGAMON, ServiceNow	System Intelligence
Unified install (Kubernetes operator)	One-step deployment of Atlas Server + WXA4Z v2 + entitled products across Linux x86, Linux on Z	Platform

Use Cases Demonstrated:

- 1. What PTFs are installed on my system?** — PTF inventory query + current availability gap analysis
- 2. What is my system running?** — Full OS/MW/SW/Application topology exploration
- 3. Health check before go-live** — Automated health artifact generation (config validation, known risk flags)
- 4. Is my system exposed? What's the blast radius?** — Vulnerability / PTF exposure analysis
- 5. Why do these two environments behave differently?** — Multi-system comparison and drift surface
- 6. Walk me through a CICS transaction flow** — Application relationship discovery + dependency chain

TechXchange environment note: The Phase 0 private preview runs on IBM-hosted infrastructure using zTrial/ZVA environments. zCX deployment support is deferred to Phase 3 (GA+2, H2 2027). *⚠ ZVA and zTrial platform details require confirmation from the Atlas platform team before use in customer-facing materials.*

WXA4Z Skills Available at Tech Xchange:

- Config-as-Code query skill
 - PTF inventory + gap analysis skill
 - Software inventory skill
 - IBM.com PTF availability lookup skill
 - Software compatibility report lookup skill
 - Multi-system topology comparison skill
-

Phase 1 — General Availability

Target: Dec 11, 2026

Theme: System Intelligence GA + Lean Change Intelligence. Reduce the workload of strategic practitioners by 60–80% for the tasks they do most.

Long-term Progress Indicator: 20% of change decisions start on Atlas (strategic practitioners driving artifacts that the rest of the team uses)

Pillar: System Intelligence (GA) + Change Intelligence (MVP — Lean PTF Orchestration)

Product Outcomes:

- First paid Atlas logos
- ≥ 10 environments connected across pilot customers
- Weekly active artifact generation rate established as baseline
- Change Intelligence scenario demonstrated end-to-end at least once per account

Customer / Buyer Outcomes:

Outcome	Target Persona	Problem Solved
"I can generate a staff onboarding guide for this environment in under 5 minutes"	Team Lead	New team member productivity time cut from weeks to days

"I can run an audit and compliance check and produce a report artifact without manually assembling evidence"	Systems Programmer / Compliance Lead	Audit prep reduced from days to hours
"I can understand the full impact of applying a PTF before I touch production"	Systems Programmer	PTF-related outages caused by insufficient impact analysis
"I can get a test plan, provision a virtual test environment, and run basic function tests — all from Atlas"	Systems Programmer	PTF validation cycle previously required dedicated lab time and deep expertise
"I can understand regulatory change requirements and map them to my environment"	CISO / Compliance Officer	Manual gap analysis between regulatory requirements and actual configuration

Capabilities Delivered:

Capability	Description	Pillar
System Intelligence (full GA)	All Tech Xchange capabilities hardened for production; multi-tenant, enterprise SSO (external OIDC), role-based access	System Intelligence
Staff Onboarding artifact generation	AI-generated environment guide: topology overview, key components, relationships, known risks	System Intelligence
Health Check artifact generation	Automated pre-change / pre-audit health report with configurable checks and risk indicators	System Intelligence

Audit & Compliance artifact generation	Evidence collection and structured compliance artifact generation mapped to common frameworks	System Intelligence
Regulatory Change Response	Map incoming regulatory requirements to topology and surface compliance gaps	System Intelligence
Lean PTF Orchestration (Change Intelligence MVP)	End-to-end PTF change scenario: AI-assisted impact analysis → Atlas test plan → DIY L2 virtual LPAR provisioning → application component deployment → smoke/function test package execution	Change Intelligence
Virtual LPAR provisioning (DIY)	Customer-operated provisioning engine for L2 virtual monoplex LPARs; limited automation, customer executes; ⚠ restricted to monoplex environments at GA — sysplex test environments are not supported; lays foundation for full Atlas-native provisioning in H1 2027	Change Intelligence
Application Deployment Engine	Shared Atlas GA capability that deploys application components from the Atlas topology model into a provisioned monoplex environment after provisioning and before test execution; required for any change scenario involving application-level validation; used across all GA change use cases	Change Intelligence
Smoke and function test package	Smoke and basic functional tests scoped to the change; pass/fail results surfaced in Atlas; GA scope is restricted to monoplex environments	Change Intelligence

Vulnerability PTF handling (conditional)	Dependency on zSecure Portal team; if integration available, vulnerability PTFs included in PTF orchestration scenario	Change Intelligence
Packaging: Atlas Base	Core subscription including System Intelligence GA + Change Intelligence lean access (rate-limited to create upsell pressure)	Commercial

WXA4Z Skills Added at GA:

- Staff onboarding guide generation skill
 - Health check report generation skill
 - Audit evidence assembly skill
 - PTF impact analysis skill
 - Regulatory change mapping skill
-

Phase 2 — H1 2027

Target: Q1–Q2 2027

Theme: Change Intelligence grows up. Move from "lean" to capable. The first meaningful shift of change work off systems programmers begins. Software patch and MW upgrade scenarios become Atlas-native.

Long-term Progress Indicator: Approaching 50% of change work shifted off systems programmers; first SWDLC cycles run natively in Atlas

Pillar: Change Intelligence (Expanding) + System Intelligence (Deepening)

Product Outcomes:

- "Atlas Provision" add-on SKU available and metered; base users have taste of capability
- "Atlas Test" add-on SKU available with expanded test types

- Change Intelligence scenarios actively used in production accounts (not just POC)
- Measurable reduction in time-to-PTF-application reported by customers
- Application code-level change scenarios piloted with early adopters

Customer / Buyer Outcomes:

Outcome	Target Persona	Problem Solved
"Atlas can provision a real test LPAR for me — I don't need to manage the lab myself"	Systems Programmer	Lab environment setup is slow, error-prone, and requires expertise
"I can do integration testing natively in Atlas, not just function testing"	Systems Programmer / QA Lead	Integration testing requires complex environment coordination
"I can apply middleware and software patches through Atlas with full traceability"	Systems Programmer	MW/SW patches are slower and riskier than PTF-only changes
"I can do application code level changes with Atlas-assisted impact analysis"	Developer / Systems Programmer	Code changes on Z require deep understanding of application topology
"Atlas tells me what capacity I'm not using and what I can reclaim"	Infrastructure Lead / Finance	Dark capacity goes undetected; procurement decisions lack data

Capabilities Delivered:

Capability	Description	Pillar
------------	-------------	--------

Atlas-native LPAR provisioning	Full automation of real LPAR provisioning; replaces DIY engine from GA; Atlas orchestrates the full provisioning cycle	Change Intelligence
Integration test orchestration	Integration tests added to test suite; broader coverage beyond function testing	Change Intelligence
Regression test orchestration	Automated regression test suite execution; pass/fail with change attribution	Change Intelligence
MW / software patch orchestration	Extend change intelligence beyond PTFs to middleware and software patch scenarios	Change Intelligence
Vulnerability PTF orchestration (if not at GA)	If zSecure dependency resolved in H1, security-driven PTF orchestration lands here	Change Intelligence
Application code change support	Application topology awareness applied to code change impact analysis; early adopter / limited availability	Change Intelligence
Atlas Provision SKU (separate entitlement)	Metered by provisioning events; unlocks full LPAR automation; base plan includes limited provisioning credits	Commercial
Atlas Test SKU (separate entitlement)	Metered by test executions; unlocks integration, regression test types; base plan includes limited test credits	Commercial
I/O topology discovery (Project Gravity integration)	I/O topology layer added to system map; storage, network I/O relationships surfaced alongside SW topology	System Intelligence

Capacity visibility	Dark capacity detection; resource utilization surfaced per LPAR/system; procurement support data	System Intelligence
Application Performance Diagnosis	Performance change attribution; diagnose application behavior changes tied to system modifications	System Intelligence

WXA4Z Skills Added in H1 2027:

- LPAR provisioning orchestration skill
 - Integration test orchestration skill
 - Regression test orchestration skill
 - MW/SW patch analysis skill
 - Application code change impact analysis skill (early access)
 - Capacity gap analysis skill
 - Performance diagnosis skill
-

Phase 3 — H2 2027

Target: Q3–Q4 2027

Theme: Predictive Intelligence emerges. Atlas moves from reactive to proactive. Config drift detection, DR validation, and advanced change analysis become core capabilities. The system starts learning.

Long-term Progress Indicator: 80% of change starts on Atlas for active accounts; sys progs confident delegating any minor or major change project to Atlas

Pillar: Predictive Intelligence (MVP) + Change Intelligence (Maturing) + System Intelligence (Business Services)

Product Outcomes:

- Predictive Intelligence scenarios demonstrated in production accounts

- Config drift alerts generating measurable intervention before outages
- DR validation scenario in use at ≥ 3 accounts
- Performance testing and stress testing piloted (dependent on CyberVault / GDPS integrations)
- Business service topology in early access
- GitHub and ServiceNow integrations driving Change Intelligence pipeline

Customer / Buyer Outcomes:

Outcome	Target Persona	Problem Solved
"Atlas tells me my environments have drifted before I discover it through an outage"	Systems Programmer / Ops	Configuration drift is one of the top causes of unexpected production incidents
"I can validate that my DR environment is production-ready before a test or real event"	BCDR Lead / Infrastructure Lead	DR tests are infrequent, manual, and often reveal gaps too late
"Atlas detected a change in my system behavior pattern before it became a problem"	Operations Lead	Anomaly detection requires dedicated monitoring tooling and expertise
"My developers can initiate changes on Z without me having to babysit every interaction"	Systems Programmer	Sysprog time consumed by admin work that doesn't require their expertise
"I can tie every change in Atlas back to a ServiceNow change record"	Change Manager	Audit trail for change management is manual and error-prone

Capabilities Delivered:

Capability	Description	Pillar
------------	-------------	--------

Config drift detection	Continuous comparison of environment state against baseline or peer environment; alert on material drift	Predictive Intelligence
Disaster recovery validation	Validate DR environment topology parity with production; surface gaps and risk before a real event	Predictive Intelligence
Production parity analysis	Automated comparison of production vs. non-production environments; highlight structural differences	Predictive Intelligence
Anomaly prediction (early)	Pattern-based anomaly detection using historical topology and change data; early warning signals	Predictive Intelligence
GitHub integration	Connect Atlas change intelligence to GitHub; associate change events with code commits, PRs, and deployment pipelines	Change Intelligence
ServiceNow integration	Bi-directional integration with ServiceNow change request workflow; Atlas changes traceable to change records	Change Intelligence
Application modernization support	Atlas-assisted assessment and sequencing of application modernization activities on Z	Change Intelligence
Performance testing (conditional)	Dependent on CyberVault + GDPS for environment replication; if integrations land in H2 2027, performance testing enters the test suite	Change Intelligence
Stress testing (stretch, H2 2027 or later)	Full environment replication via CyberVault / GDPS; stress test and soak test scenarios	Change Intelligence

zCX deployment support	zCX added as a supported deployment target for Atlas Server; deferred from GA and GA+1 to Phase 3 (GA+2); TechXchange and GA use zTrial/ZVA environments	Platform
Business service topology	Map Z infrastructure and applications to business services; surface business impact of technical changes	System Intelligence
Application modernization topology	Identify modernization candidates; assess refactoring vs. re-platforming options with topology context	System Intelligence

WXA4Z Premium Skills (Feature-Flagged, H2 2027):

- Config drift analysis and alerting skill
 - DR readiness assessment skill
 - GitHub change attribution skill
 - ServiceNow change record skill
 - Business service mapping skill
 - Anomaly detection and early warning skill
-

Phase 4 — 2028+

Target: 2028 and beyond

Theme: Atlas becomes the front door to IBM Z. Any practitioner planning to do a job on Z starts in Atlas. Environments are normalized, standardized, and self-learning. Atlas integrates with the broader IBM Z portfolio commercially and technically — without overstepping. Systems programmers evolve from administrators to strategic operators.

Long-term Progress Indicator: Atlas is the default entry point for all Z change work; meaningful commercial contribution through portfolio upsell/attach

Pillar: Platform Evolution (All Pillars Mature) + Portfolio Gateway

Customer / Buyer Outcomes:

Outcome	Target Persona	Problem Solved
"Any practitioner on my team — sysprog, developer, junior dev — starts on Atlas to understand and change our Z environment"	CIO / IT Director	Skills gap on Z is a board-level risk; Atlas democratizes access
"Atlas recommends other IBM products I should be using based on gaps it has detected in my environment"	IT Director / Procurement	Customers don't know what IBM products could help them; discovery is manual
"I can procure and activate an IBM Z product directly inside Atlas"	IT Director / Procurement	Software procurement on Z is slow and friction-heavy
"My Atlas environment learns from every change and helps me avoid repeating mistakes"	Systems Programmer / Ops	Institutional knowledge is captured in Atlas, not in people's heads
"Atlas has synergy with Concert for Z — I can use both and they complement each other"	Systems Programmer / IT Director	Customers want clear product differentiation; overlapping tools create confusion

Capabilities Planned:

Capability	Description	Pillar
------------	-------------	--------

IBM zSW portfolio gateway	Atlas surfaces recommendations for relevant IBM Z products based on detected gaps; direct procurement / activation from within Atlas	Portfolio
Self-learning topology	Atlas learns from historical change outcomes and topology evolution; incorporates learning into recommendations	Predictive Intelligence
Concert for Z deep integration	Complementary integration without overlap; Atlas handles topology + change + predictive; Concert handles operational monitoring	Portfolio
Advanced stress testing	Full environment replication (CyberVault + GDPS); production-scale stress and performance testing	Change Intelligence
Developer-native Z workflows	Developer persona fully supported; junior devs can initiate and execute Z changes through Atlas without sysprog oversight	Change Intelligence
Environment normalization	Standardized environment templates; Atlas enforces and maintains configuration standards across environments	System Intelligence
Business service continuity planning	Business service topology used for continuity planning, BIA (Business Impact Analysis), and recovery orchestration	Predictive Intelligence

Strategic Evolution Arc

Know Your Environment

System Intelligence GA
+ Lean Change MVP

Topology discovery
PTF inventory
Artifact generation
Health / audit / onboard
Agentic chat (TIB)

Change Safely

Change Intelligence
(Full Capability)

Real LPAR provisioning
Integration testing
MW/SW patch orch.
App code change support
I/O topology (Gravity)

Persona-Value Map

Persona	Value Unlocked at GA (Dec 2026)	Value Unlocked at H1 2027	Value Unlocked at H2 2027+
Systems Programmer	Topology answers in seconds; health check artifacts; PTF impact analysis; lean PTF test scenario	Atlas provisions test LPARs; integration + regression testing; MW/SW patches	Config drift alerts; DR validation; delegates minor changes to Atlas
CISO / Compliance Officer	Audit evidence artifacts; vulnerability exposure analysis; regulatory change mapping	Security PTF orchestration; automated compliance evidence	Continuous compliance posture; drift alerting

Team Lead / Manager	Staff onboarding artifacts; environment documentation	Capacity reporting; team productivity metrics	Full change governance visibility
Developer	Application topology visibility; transaction flow understanding	Application code change impact analysis (early access)	Developer-native Z change workflows; self-service testing
IT Director / CIO	Proof of platform; pipeline creation	Measurable productivity improvement data	Strategic view of Z portfolio; upsell recommendations; cost optimization

Packaging & Commercial Model

Base Subscription (Atlas)

Includes System Intelligence (full), Lean Change Intelligence (rate-limited), and standard WXA4Z skills. Customers get a taste of provisioning and testing capabilities — enough to understand the value but with friction that creates upsell pressure.

Atlas Provision (Add-On SKU)

- **Unlocks:** Full Atlas-native LPAR provisioning; automated provisioning orchestration; environment lifecycle management
- **Metered by:** Provisioning events / environment hours
- **Available:** H1 2027

Atlas Test (Add-On SKU)

- **Unlocks:** Integration testing, regression testing, performance testing (when available); unlimited test executions; advanced test analytics
- **Metered by:** Test execution events
- **Available:** H1 2027

Atlas Portfolio Gateway (Future, 2028+)

- **Unlocks:** IBM zSW product discovery, recommendations, and direct activation from within Atlas
 - **Commercial model:** Platform transaction fee / referral revenue on activated products
-

Master Epic Alignment

The following table maps roadmap phases to master epic buckets, enabling future synchronization when GitHub master epics are updated. Epic IDs are placeholders — update when epics are cleaned and numbered.

Phase	Master Epic Bucket	GitHub Epic Label (placeholder)	Expected Delivery
Oct 2026 (Private Preview)	System Intelligence MVP	epic/system-intelligence-mvp	Oct 26, 2026
Dec 2026 (GA)	System Intelligence GA	epic/system-intelligence-ga	Dec 11, 2026
Dec 2026 (GA)	Change Intelligence MVP (Lean PTF)	epic/change-intelligence-lean	Dec 11, 2026

H1 2027	Change Intelligence — Provisioning	epic/atlas-provision	H1 2027
H1 2027	Change Intelligence — Testing	epic/atlas-test	H1 2027
H1 2027	Change Intelligence — MW/SW Patch	epic/change-mwsw-patch	H1 2027
H1 2027	System Intelligence — I/O Topology	epic/io-topology-gravity	H1 2027
H2 2027	Predictive Intelligence — Drift & DR	epic/predictive-drift-dr	H2 2027
H2 2027	Change Intelligence — GitHub + ServiceNow	epic/change-integrations	H2 2027
H2 2027	System Intelligence — Business Services	epic/biz-service-topology	H2 2027
2028+	Portfolio Gateway	epic/portfolio-gateway	2028+

Maintenance note: When a master epic is re-sequenced in GitHub, update the "Expected Delivery" column in this table and verify the phase narrative above still reflects the correct scope.

Key Dependencies & Risks

Dependency	Risk	Mitigation	Owner
zSecure Portal integration (vulnerability PTFs)	Vulnerability PTF scenario may slip from GA to H1 2027	Scope GA without vulnerability PTFs; plan H1 catch-up sprint	Dependency: zSecure Portal team
Project Gravity (I/O topology)	I/O discovery may slip from H1 to H2 2027	I/O topology positioned as enhancement; does not block core change scenarios	Dependency: Project Gravity team
IBM CyberVault + GDPS (stress testing)	Full environment replication for stress testing is complex; likely H2 2027 or later	Performance and stress testing scoped as conditional; do not block roadmap commitments	Dependency: CyberVault + GDPS teams
WXA4Z v2 (FINN) in-cluster	SaaS-based FINN used at Aug playback; in-cluster by Sept target	Fallback to SaaS connectivity if in-cluster slips; not customer-visible at Tech Xchange	Atlas Platform squad
Customer data for discovery	Tech Xchange uses IBM-hosted environment (Bank of Z); real customer onboarding requires network connectivity + firewall exceptions	Provide clear network requirements documentation; offer IBM-hosted demo path as fallback	Atlas Solutions Engineering

Skills gap on customer side	Customers may lack skills to configure DIY provisioning engine at GA	Provide clear runbooks; offer PS engagement option; position H1 Atlas Provision SKU as the upgrade path	Atlas Product + PS
⚠ Prerequisite-chain resolution (cross-product, unvalidated)	Cross-product PTF fix-chain reasoning has not been validated against a representative multi-product scenario. Targeted for GA or GA+1 but not confirmed. Proof Point 3 in GA materials is conditional on this.	Do not include cross-product prereq-chain claims in external or customer-facing materials until validated. Withdraw Proof Point 3 if not validated by Dec 11 2026.	Atlas Change Intelligence squad
⚠ zCX deployment support (deferred to GA+2)	zCX is not available as a deployment target at GA or GA+1. TechXchange demo uses zTrial/ZVA. Phase 3 (H2 2027) is the planned target.	Plan for zCX integration in Phase 3 planning cycle. Do not reference zCX as a GA or H1 2027 deployment target.	Atlas Platform squad

 Application topology dependency for application-level impact analysis	PTF impact claims at the application level depend on application topology data from ZUnderstand/ ZoC. Without this data at GA, application-level impact analysis is limited to subsystem scope.	Scope GA impact analysis claims to subsystem level unless ZUnderstand/ ZoC data is confirmed available.	Atlas Change Intelligence squad
--	---	---	---------------------------------

Sales Summary

This section is intended for sellers and technical sales to quickly understand what value is available when, and what conversations to lead with at each stage.

What to sell TODAY (targeting GA Dec 11, 2026)

Lead story: *"Your systems programmers spend most of their time answering questions your team already has the data to answer. Atlas does that work for them — in seconds, with AI."*

Customer Pain	Atlas Answer	When Available
---------------	--------------	----------------

"We don't know what's running on our Z systems without asking one specific person"	Automated OS/MW/SW/ App topology discovery + natural language Q&A	GA Dec 2026
"Onboarding a new team member to our Z environment takes weeks"	Staff onboarding artifact generation in minutes	GA Dec 2026
"Our pre-change health checks and audit prep take days"	Health check and audit artifacts generated automatically	GA Dec 2026
"We're nervous about PTF impact — we don't always know what will break"	AI-assisted PTF impact analysis + lean test scenario	GA Dec 2026
"Our CISO needs proof of compliance posture and it's painful to produce"	Audit & compliance artifact generation with evidence collection	GA Dec 2026

Proof point for executives: Atlas has been running on a real IBM mainframe environment (Bank of Z) since mid-2026. Every demo scenario uses real discovered data — no mocked responses.

What to sell for H1 2027 (land and expand)

Lead story: *"Once Atlas knows your environment, it can change it. H1 2027 unlocks the ability to provision test environments and run real testing — natively in Atlas."*

Customer Pain	Atlas Answer	SKU
"We don't have enough lab capacity for safe PTF and patch testing"	Atlas-native LPAR provisioning; Atlas provisions test environments on demand	Atlas Provision (add-on)

"Our regression testing is manual, slow, and often skipped under time pressure"	Automated integration and regression testing orchestrated by Atlas	Atlas Test (add-on)
"Applying middleware and software patches is our riskiest change type"	MW/SW patch orchestration with full impact analysis and test coverage	Atlas Base + add-ons
"Our developers touch Z but we can't give them enough context about impact"	Application code change impact analysis; app topology surfaced in chat	Atlas Base

What to sell for H2 2027 (strategic accounts)

Lead story: *"Atlas doesn't just help you change safely — it helps you stay ahead. Config drift, DR validation, and predictive alerting make Atlas the operational backbone for Z."*

Customer Pain	Atlas Answer	SKU
"We find out environments have drifted when production breaks, not before"	Continuous config drift detection and alerting	Atlas Base (Predictive)
"Our DR tests are infrequent and we're never confident in the results"	DR environment parity validation; automated readiness scoring	Atlas Base (Predictive)
"Every change needs a ServiceNow ticket but the data entry is manual"	ServiceNow bi-directional integration; Atlas changes auto-linked to change records	Atlas Base (Integrations)

"Our developers want to work on Z but our sysprogs can't babysit every change"	Developer-native change workflows; Atlas acts as guardrails + automation layer	Atlas Base + add-ons
--	--	----------------------

Long-term vision (2028+) — use for C-suite conversations

"IBM's vision is for Atlas to become the front door to the entire IBM Z software portfolio. Customers will procure, activate, and use IBM Z products directly within Atlas. The more an organization standardizes on Atlas, the more value they unlock — both from Atlas itself and from the broader IBM Z ecosystem."

Document maintained by Product Management. For GitHub epic synchronization, see the Master Epic Alignment section above. For questions, contact the Atlas product team.
